

Quantifiable Risk Management

ZenGRC delivers quantifiable risk management through advanced analytics and customizable scoring methodologies. Our platform enables precise risk quantification with tailored variables, weightings, and scoring systems, providing a clear, data-driven view of your organization's risk landscape for informed decision-making.

Functionality That Sets Us Apart

- **Risk Management:** Quick start with preloaded risk registers and scoring methodologies, or import and easily configure your own scoring methodology.
- **Advanced Risk Analytics:** Leverage prebuilt content and fully customizable risk calculations with multiple variables, weightings, and scores for precise risk assessment tailored to your organization's needs.
- **Intelligent Workflow Automation:** Streamline operations with automated task delegation based on risk changes, ensuring efficient resource allocation and timely risk mitigation.
- **Centralized Risk Intelligence:** Manage your entire risk landscape from a unified platform, tailoring risk categorization to your organization's structure — by business unit, product, system, or any relevant dimension — for truly customized governance and control.

Core Capabilities:
